

CO2-AT2-ASSIGNMENT

NAME: V Rakshana

SLOT: B

REGNO :192425137

COURSE CODE: CSA0911

QUESTION-1:

QUESTIONS

Q1
Railway Coach and Seat Parser
10 marks

Q2
Warehouse Damaged Item Removal
10 marks

Q3
Restaurant Digital Order Analyzer
10 marks

3/3 answered

Q1 Railway Coach and Seat Parser10 marks

Indian Railways stores ticket information as S5-43. Write a Java program that:
Splits the value using split()
Extracts the coach number using substring()
Displays the coach type using charAt()

Your Code

```
1 import java.util.Scanner;
2 public class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         String ticket = sc.nextLine();
6         String[] parts = ticket.split("-");
7         String coachNumber = parts[0].substring(1);
8         char coachType=parts[0].charAt(0);
9         System.out.println("Coach Type: " + coachType);
10        System.out.println("Coach Number: " + coachNumber);
11        System.out.println("Seat Number: " + parts[1]);
12    }
13 }
```

Run Save

Input

S5-43

Output

Coach Type: S
Coach Number: 5
Seat Number: 43

QUESTION-2:

3/3 answered

Q2 Warehouse Damaged Item Removal10 marks

A warehouse stores item names in an inventory list. Damaged items must be removed safely while traversing the collection.
Requirements:
Store inventory items in an ArrayList
Traverse the list using an Iterator
Remove items marked as Damaged and display the remaining inventory

Your Code

```
1 import java.util.*;
2 public class warehouse {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         int n = Integer.parseInt(sc.nextLine());
6         ArrayList<String> items = new ArrayList<>();
7         for (int i = 0; i < n; i++) {
8             items.add(sc.nextLine());
9         }
10        Iterator<String> it = items.iterator();
11        for (String item : items) {
12            System.out.println(item);
13        }
14    }
15 }
```

Input

5
Rice
Damaged
Sugar
...

Output

Rice
Damaged
Sugar
Oil
Damaged

QUESTION-3:

3/3 answered

Q3 Restaurant Digital Order Analyzer10 marks

A restaurant stores orders as DOSA-3-IDLY-2-VADA-1. Create a program that:

- Splits the order using split()
- Converts food names to uppercase using toUpperCase()
- Counts the number of ordered items using length()

Your Code

```
1 import java.util.Scanner;
2 public class Main {
3     public static void main(String[] args) {
4         Scanner sc = new Scanner(System.in);
5         String order = sc.nextLine();
6         String[] items = order.split(",");
7         for (String item : items) {
8             String[] data = item.split("-");
9             System.out.println(data[0].toUpperCase() + " : " + data[1]);
10        }
11        System.out.println("Total Items: " + items.length);
12    }
13 }
```

Input

dosa-3,idly-2,vada-1

Output

DOSA : 3
IDLY : 2
VADA : 1
Total Items: 3
